Software
for *DIGIMIC*[®]

Network-based Conference
Technology by Brähler ICS

smart Conferencing

smart Conferencing is the decisive factor to react to changing requirements of the market. Our new software technology is based on experience from over fifty years in the fields of the congress industry. brählerOS software modules can be arranged individually and are able to be extended at all times.

Creating Meetings and Conferences

The Administration Tool configures all conference specific content like rooms, seats, participants, conferences, etc. and stores those configurations in the database.

MicControl based on brählerOS

The new MicControl Mimic Panel is designed to create, store and use all kinds of microphone unit layouts within your conference at any place within the network: Chairperson, Secretary, Operator, Management.

CamControl

CamControl easily integrates a video camera system into the DIGIMIC conference environment. CamControl will always choose the best possible picture: automatically or as a recommendation and preset for your video director.

IdentControl

Due to the advanced database concept, all relevant conference settings, data and delegate information is available at your hand. Brähler's smart Conferencing Software let you efficiently administrate all information from a central position. This guarantees that all sensitive information is secured against unwanted interference.

TimeControl

Speaking time, Speaking Time Credits, assignable to Delegates, Mic Groups, Conferences, and Delegate groups. Visualisation in Software by Traffic Light and Timer.

DIGIVOTE - parliamentary voting

From secret or open vote, automatic or manual quorum and/or adoption of subjects, different styles and ways of displaying the result to the public up to control, logging and administration.

Special Keys

Allow you to fully customize your DIGIMIC conference system and tailor to your individual requirements.

smart Conferencing

Flexible, Individual, Scalable and Future-proof.

A hardware-software symbiosis by Brähler

The new smart conferencing software development by Brähler offers you the perfect tool for conducting the widest variety of efficient and smooth conferences.

The network-based, modern client-server architecture enables the distribution of various conference applications such as microphone control, registration of the delegates and voting management to various terminals. This provides the individual operator with an intuitive task-optimised surface for easy and effective operation.

With the conference operating system brählerOS we designed a completely new and future-proof conference software for management, preparation, control, and wrap-up of one or more conferences based on the DIGIMIC hardware family. Each event can be set up globally and controlled locally within one conference room, in parallel operation between multiple conference rooms or even in a flexible combination of different rooms.

The Brähler conference operating system coordinates and manages all components of our software modules and hardware of the different conference locations.

This clear structure, arrangement and central communication ensures combined data use and data security, in addition to significantly higher performance. Future proof, easy upgrade and maintenance were an important focus during our development. The integrated update server enables the simple addition of new applications and/or system updates in order to remain state-of-the-art; from the brählerOS operating system to the user software to the multimedia interface (touchscreen).

Using our associated conference app, delegates can individually access all provided information on a conference and are more intensively integrated.

The app is platform independent and scalable. Choose size and format you planned for your conference room. This solution offers you the highest flexibility and reliability as well as the wide range of functions that you expect, individually adapted to your specific needs.

Network-based Conference Technology by Brähler. One Solution for all of your Events.

brählerOS allows straightforward inclusion of Setup, Administration, Database, Webserver, License Manager, and Diagnostic.

The conference modules can be individually combined, licensed and used as needed.

You purchase only those functions you really need or want to use. In addition, you choose the period of use, from a single day to eternity.

- Toolbar controlled access to all functions and user interfaces
- One click installation and updates
- Automated system health status information

Updates are carried out automatically when required for all components in the system by brählerOS. Adding new features or regular updates are done with one single file. The Database server stores and administrates all conference data and information in one place, making these information available everywhere it's required.

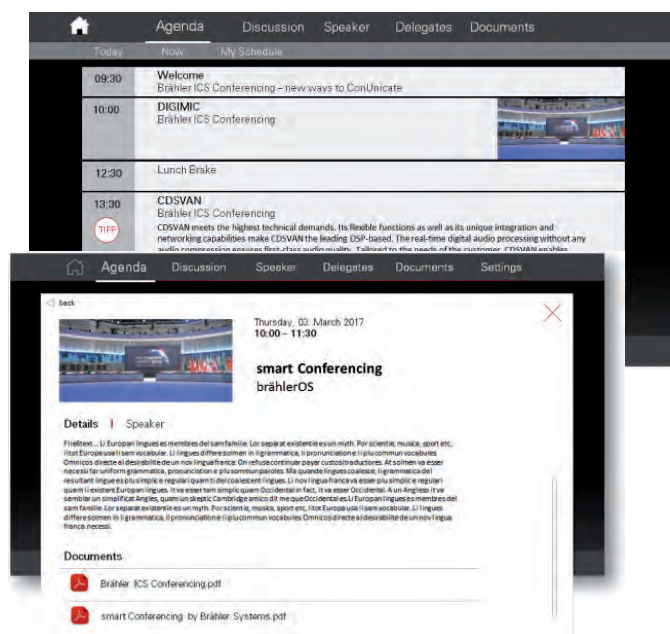

brählerOS

Delegate Conference App

The Brähler Conference App for your Congress.
All information readily available at your delegates' fingertips.

Features

- Cross-Platform Conference Application runs on Windows, iOS, and Android
- Different display sizes possible
- All relevant congress data available at a glance
- Offers you a cutting edge service for your participants
- Easy registration
- A lively congress experience through interaction with the delegates
- Straight forward congress management
- All event details are constantly updated, giving you the opportunity to respond more rapidly to content changes
- Sustainability by cutting back on printing costs and environment

smart Conferencing by Brähler

your benefits

Software

- Installation of one single software solution
- Manage your entire conference from anywhere
- Perfect data management by using one consistent database
- Choice of application components in accordance with the tasks
- All conference applications based on one central management platform
- Future-proof
Future requirements in the dynamic world of multimedia-based requests can be easily integrated into the DIGIMIC system by upgrade

Hardware

- Application and customer-oriented
- Long-term flexibility and modularity
- One solution for various individual applications
- Available with all current international power strips
- Perfect design, technology can be hidden in the furniture
- One product can be used in many different installation scenarios
- High degree of flexibility and adaptability to future requirements
- Power sockets and USB Charger next to conference technology
- Numerous designs and models for fitting in and on desks
- Flexibly interchangeable modules for customized conference applications together with data, video, additional audio connections, and power supply
